

In this project, I answered key business questions related to customer demographics, sales performance, channel efficiency, regional contribution, and operational effectiveness using Excel dashboards.

Questions:

1. How is Brindha Store performing overall in terms of sales and orders in 2022?
2. Does a higher number of orders always result in higher sales?
3. Which gender contributes more to overall sales — Men or Women?
4. Which age group contributes the most to sales?
5. Which age group and gender combination is most valuable to the business?
6. What percentage of orders are delivered, cancelled, or returned?
7. Are returns and cancellations impacting business performance?
8. Which states contribute the most to total sales?
9. Is the business dependent on a few states for most of its revenue?
10. Which sales channels generate the highest revenue?
11. Is the business overly dependent on a few sales channels?
12. How do sales and orders vary across different months?
13. Who are the most valuable customers for Brindha Store?
14. Where should the business focus its marketing and inventory efforts?
15. How can management quickly monitor business performance?

Brindha Store – Detailed Excel Analysis Report (2022)

1. Overview of the File

The Excel file is a sales and customer performance dashboard for *Brindha Store – 2022*.

It combines:

- Raw transactional data
- Summary tables
- Dashboard-level insights (used for charts & slicers)

The file is well-structured for Excel Dashboard & Data Analysis projects.

2. Sheet-wise Analysis

Sheet 1: *Brindha Store Report 2022*

- This sheet works as a title / dashboard landing page
- No raw data is stored here
- Used mainly for:
 - Dashboard layout
 - Headings
 - Visual presentation

Purpose: Presentation & reporting

Sheet 2: *Brinda Store (Main Data Sheet)*

This is the core dataset of the project.

Data Size

- Rows: 31,047
- Columns: 21

Key Columns Explained

Column Name	Description
Order ID	Unique order identifier
Cust ID	Customer identification number

Gender	Male / Female
Age	Customer age
Age Group	Categorized age buckets
Date	Order date
Month	Month of order
Status	Order status (Delivered, Cancelled, Returned, etc.)
Channel	Sales channel (Amazon, Flipkart, Myntra, etc.)
State	Customer state
Category	Product category
Amount	Order value

This sheet is used as the data source for all reports, pivot tables, and charts.

Sheet 3: Sales vs Orders

- Compares Total Sales Amount vs Total Orders
- Helps identify:
 - Revenue trend
 - Average order value impact

Business Insight: High order volume does not always mean high revenue.

Sheet 4: Men vs Women

- Gender-wise order or sales distribution

Key Insight:

- Women customers contribute more to sales compared to men
- Indicates stronger female customer base

Business Action: Focus marketing campaigns on female-oriented products.

Sheet 5: *Order Status*

Shows order distribution by:

- Delivered
- Cancelled
- Returned
- Refunded

Observations:

- Majority of orders are successfully delivered
- Small percentage of cancellations & returns

Business Action: Improve return-reduction strategies to increase net revenue.

Sheet 6: *Top States*

Displays top-performing states by sales

Typical Insights:

- A few states contribute the majority of revenue
- Helps in regional performance analysis

Business Action: Increase promotions & inventory in high-performing states.

Sheet 7: *Age & Gender*

- Breaks customers into age groups by gender

Key Insight:

- Adult age group (26–45) dominates purchases
- Female customers dominate across most age groups

Business Action: Target ads for working professionals & adults.

Sheet 8: *Channel*

- Sales contribution by sales channels:
 - Amazon
 - Flipkart
 - Myntra
 - Others

Observations:

- One or two channels contribute the highest sales
- Indicates channel dependency

Business Action: Diversify channel strategy to reduce risk.

3. Overall Business Insights

Key Findings

- Female customers are the primary revenue drivers
 - Adult age group contributes maximum sales
 - Few states & channels dominate overall performance
 - Delivery success rate is high
-

4. Excel Skills Demonstrated in This File

This project clearly demonstrates:

- ✓ Data Cleaning
 - ✓ Pivot Tables
 - ✓ Pivot Charts
 - ✓ Slicers
 - ✓ Dashboard Design
 - ✓ Business Analysis
 - ✓ Conditional Formatting
 - ✓ Report Presentation
-

Conclusion

This Excel file represents a complete end-to-end Excel Data Analytics project:

- Raw data → analysis → insights → dashboard
